

REMARKS:

REMARKS REGARDING CLAIMS AMENDMENTS:

The designation of claims 2-10 and 13-15 as being allowable is acknowledged with appreciation. Claims 1, 11 and 12 have been amended into what is presently urged as allowable format.

THE CLAIM AMENDMENTS:

Each of claims 1, 11 and 12 have been amended to recite "a pressured tank supplied with compressed air from a compressor [and] a compressed air line that connects an outlet from the pressured tank to an inlet of a first active component". Antecedent basis for this amendment is found at least in claim 4 above.

Regarding the two references (*Harden, III et al.* '873 and *Suenaga et al.* - JP 56-38516) upon which these claims have been previously rejected, neither teaches, suggests or discloses the imposition of a pressured tank between the compressor and first active component. These references are directed toward increasing the amount of intake air supplied to combustion engines using the known practice of "supercharging," a practice that would be rendered inoperable if such a pressured tank, as recited by Applicant, was imposed into those systems. Therefore, it is respectfully asserted that claims 1, 11 and 12 are allowable.
